IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-6 (Canceled).

- 7. (Currently Amended) A light-emitting device comprising:
- a display portion formed over a substrate, said display portion comprising a switching element and a current control element; and

a driver circuit comprising an inverter circuit formed over said substrate,

wherein all semiconductor elements in said switching element, said current control element, and said inverter circuit are n-channel type semiconductor elements,

wherein said display portion comprises a plurality of pixels, [[and]]

wherein each of said plurality of pixels comprises a light-emitting element, and

wherein the display portion and the driver circuit do not comprise a p-channel type semiconductor element.

- 8. (Previously Presented) A light-emitting device according to claim 7, wherein said substrate is a plastic substrate covered with a protective film.
- 9. (Original) A light-emitting device according to claim 7, wherein said semiconductor elements comprise thin-film transistors.
 - 10. (Original) A light-emitting device according to claim 7, wherein said driver circuit

comprises at least one of an EEMOS circuit and an EDMOS circuit.

11. (Canceled)

12. (Previously Presented) A light-emitting device according to claim 7, wherein said light-emitting device is incorporated in one selected from the group consisting of an EL display, an image playback device, a personal computer, a video camera, a digital camera, a mobile computer, a mobile telephone, and an audio.

13-27. (Canceled)

- 28. (Previously Presented) A light-emitting device comprising:
- a display portion comprising a plurality of pixels formed over a substrate; and
- a driver circuit formed over said substrate,

wherein said driver circuit comprises a shift register containing a plurality of flip-flop circuits comprising enhancement-type n-channel thin film transistors and depletion-type n-channel thin film transistors,

wherein all semiconductor elements in said display portion and said driver circuit are nchannel type semiconductor elements, and

wherein each of said plurality of pixels comprises a light-emitting element.

29. (Previously Presented) A light-emitting device according to claim 28, wherein said substrate is a plastic substrate covered with a protective film.

30. (Canceled)

- 31. (Previously Presented) A light-emitting device according to claim 28, wherein said light-emitting device is incorporated in one selected from the group consisting of an EL display, an image playback device, a personal computer, a video camera, a digital camera, a mobile computer, a mobile telephone, and an audio.
 - 32. (Previously Presented) A light-emitting device comprising:
 - a display portion comprising a plurality of pixels formed over a substrate; and
 - a driver circuit formed over said substrate,

wherein said driver circuit comprises a shift register containing a plurality of flip-flop circuits comprising enhancement-type n-channel thin film transistors and depletion-type n-channel thin film transistors, and comprises a plurality of NAND circuits each comprising first and second enhancement-type n-channel thin film transistors and a depletion-type n-channel thin film transistor,

wherein a gate electrode of first enhancement-type n-channel thin film transistor is connected to a first output line,

wherein a source electrode of first enhancement-type n-channel thin film transistor is connected to a ground power supply line,

wherein a drain electrode of first enhancement-type n-channel thin film transistor is connected to second enhancement-type n-channel thin film transistor,

wherein all semiconductor elements in said display portion and said driver circuit are nchannel type semiconductor elements, and

wherein each of said plurality of pixels comprises a light-emitting element.

33. (Previously Presented) A light-emitting device according to claim 32, wherein said substrate is a plastic substrate covered with a protective film.

34. (Canceled)

35. (Previously Presented) A light-emitting device according to claim 32, wherein said light-emitting device is incorporated in one selected from the group consisting of an EL display, an image playback device, a personal computer, a video camera, a digital camera, a mobile computer, a mobile telephone, and an audio.

36. (Previously Presented) A light-emitting device comprising:

a display portion comprising a plurality of pixels formed over a substrate; and

a driver circuit formed over said substrate,

wherein each of said plurality of pixels comprises a plurality of enhancement-type n-channel thin film transistors and a plurality of depletion-type n-channel thin film transistors,

wherein all semiconductor elements in said display portion and said driver circuit are nchannel type semiconductor elements, and

wherein each of said plurality of pixels comprises a light-emitting element.

37. (Previously Presented) A light-emitting device according to claim 36, wherein said substrate is a plastic substrate covered with a protective film.

38-39. (Canceled)

40. (Previously Presented) A light-emitting device according to claim 36, wherein said light-emitting device is incorporated in one selected from the group consisting of an EL display, an image playback device, a personal computer, a video camera, a digital camera, a mobile computer, a mobile telephone, and an audio.

41. (Previously Presented) A light-emitting device comprising:

a display portion comprising a plurality of pixels formed over a substrate; and

a driver circuit formed over said substrate,

wherein each of said pixels comprises an SRAM formed by a plurality of enhancement-type n-channel thin film transistors and a plurality of depletion-type n-channel thin film transistors,

wherein all semiconductor elements in said display portion and said driver circuit are nchannel type semiconductor elements, and

wherein each of said plurality of pixels comprises a light-emitting element.

42. (Canceled)

43. (Previously Presented) A light-emitting device according to claim 41, wherein said substrate is a plastic substrate covered with a protective film.

44. (Canceled)

45. (Previously Presented) A light-emitting device according to claim 41, wherein said light-emitting device is incorporated in one selected from the group consisting of an EL display, an image

playback device, a personal computer, a video camera, a digital camera, a mobile computer, a mobile telephone, and an audio.

- 46. (Previously Presented) A light-emitting device according to claim 28, wherein each of said plurality of flip-flop circuits comprises an enhancement-type n-channel thin film transistor and two circuits.
- 47. (Previously Presented) A light-emitting device according to claim 46, wherein one of the circuits is an EEMOS circuit.
- 48. (Previously Presented) A light-emitting device according to claim 46, wherein one of the circuits is an EDMOS circuit.
- 49. (Previously Presented) A light-emitting device according to claim 46, wherein each of said plurality of flip-flop circuits further comprises an inverter circuit.
- 50. (Previously Presented) A light-emitting device according to claim 28, wherein one of the enhancement-type n-channel thin film transistors is electrically connected with one of the depletion-type n-channel thin film transistors.
- 51. (Previously Presented) A light-emitting device according to claim 46, wherein said plurality of flip-flop circuits are connected in series.

52. (Canceled)

53. (Previously Presented) A light-emitting device according to claim 7, wherein a semiconductor element in the display portion has at least two channel forming regions.

54-56. (Canceled)

- 57. (Previously Presented) A light-emitting device according to claim 28, wherein a semiconductor element in the display portion has at least two channel forming regions.
- 58. (Previously Presented) A light-emitting device according to claim 32, wherein a semiconductor element in the display portion has at least two channel forming regions.
- 59. (Previously Presented) A light-emitting device according to claim 36, wherein a semiconductor element in the display portion has at least two channel forming regions.
- 60. (Previously Presented) A light-emitting device according to claim 41, wherein a semiconductor element in the display portion has at least two channel forming regions.

61. (Canceled)

62. (Previously Presented) A light-emitting device according to claim 7, wherein each of said plurality of pixels comprises a capacitor.

63-65. (Canceled)

66. (Previously Presented) A light-emitting device according to claim 28, wherein each of said plurality of pixels comprises two semiconductor elements a switching element, a current control element for controlling an amount of current to the light-emitting element, and a capacitor.

67. (Previously Presented) A light-emitting device according to claim 32, wherein each of said plurality of pixels comprises two semiconductor elements a switching element, a current control element for controlling an amount of current to the light-emitting element, and a capacitor.

68. (Previously Presented) A light-emitting device according to claim 36, wherein each of said plurality of pixels comprises two semiconductor elements a switching element, a current control element for controlling an amount of current to the light-emitting element, and a capacitor.

69. (Previously Presented) A light-emitting device according to claim 41, wherein each of said plurality of pixels comprises two semiconductor elements a switching element, a current control element for controlling an amount of current to the light-emitting element, and a capacitor.

70. (Previously Presented) A light-emitting device according to claim 7, wherein the semiconductor element is an inverted stagger thin film transistor including a microcrystalline semiconductor film.

71-73. (Canceled)

- 74. (Previously Presented) A light-emitting device according to claim 28, wherein the semiconductor element is an inverted stagger thin film transistor including a microcrystalline semiconductor film.
- 75. (Previously Presented) A light-emitting device according to claim 32, wherein the semiconductor element is an inverted stagger thin film transistor including a microcrystalline semiconductor film.
- 76. (Previously Presented) A light-emitting device according to claim 36, wherein the semiconductor element is an inverted stagger thin film transistor including a microcrystalline semiconductor film.
- 77. (Previously Presented) A light-emitting device according to claim 41, wherein the semiconductor element is an inverted stagger thin film transistor including a microcrystalline semiconductor film.
